1. Cannabinoid Totals account for mass difference between acid and decarboxylated forms
2. Cannabinoid Totals account for mass difference between acid and decarboxylated forms.

**†Method Detection Limit (MDL):**

In microbiological testing, this is the minimum level of growth that can be detected with confidence. If a result is reported as "None Detected", it means any visible growth was below this limit.

**†Limit of Quantitation (LOQ):**

In analytical chemistry testing, this is the minimum level of the desired analyte that can be quantified with confidence. If a result is reported as less than LOQ, it means any detected amount was too small to report an exact number.
